

# ACCESSIBLE, QUALITY REFURBISHED MEDICAL EQUIPMENT SOLUTIONS

For over 20 years, Radiology Oncology Systems has been providing affordable, high quality refurbished radiation therapy and diagnostic imaging equipment solutions to facilities around the world and increasing access to health care treatments and services for millions of patients.

# What Matters To You Matters To Us.

We know that you want the best quality medical equipment for your investment and for your patients.

At Radiology Oncology Systems, we offer a large selection of affordable, refurbished radiation therapy and diagnostic imaging equipment solutions, including CT Scanners, MRI systems and linear accelerators, that allow you to provide your patients with the treatments and services they need.

## Radiation Therapy Equipment

We specialize in providing radiation oncology practices with the highest quality, refurbished linear accelerators and CT simulators so you can provide your patients with the best in cancer-fighting treatments.

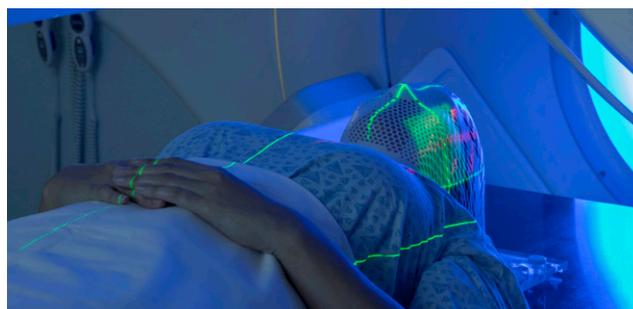

## Diagnostic Imaging Equipment

We provide a range of diagnostic imaging equipment to help you accurately diagnose illnesses or injuries, including: CT scanners, MRI systems, and PET/CT scanners.

## Start-to-Finish Medical Equipment Services

We provide an experienced project management team to work with you during every step of your equipment purchase and offer a full range of services from removals and disposals to virtual inspections to training.

## Accessories and Parts

We offer a range of new and pre-owned accessories, parts, and upgrades for your linear accelerators, CT scanners and MRI systems to help you extend the life of your equipment and outfit your entire department.

# Is Buying Refurbished Medical Equipment Right For You?

Depending on your specific needs and financial constraints, purchasing refurbished or pre-owned medical equipment can provide significant benefits for your facility.

## Grow your Practice

Whether you're opening a new center, adding additional equipment, or just want to enhance your clinic's capabilities, buying refurbished medical equipment is a savvy way to grow your practice.

## Maintain Strong Backups

Should something happen with one of your existing machines, a refurbished system can serve as a valuable backup to ensure there's no interruption in patient care.

## Improve Patient Care

Purchasing a refurbished machine allows you to purchase technology you may not be able to afford otherwise. It also frees up budget dollars that can be used to invest in other areas of your practice, such as new upgrades, a remodel, or hiring more staff, thereby improving your practice and the lives of your patients.

## Improve ROI

Payers make no distinction between new and refurbished. So why pay more for the same reimbursement? Additionally, buying "experienced" equipment often means lower annual maintenance/service contract expenses. The bottom line is a better bottom line.

## Lower Financial Risk

Uncertainty of patient volume. Future competitive threats. Reimbursement rate changes. There are always risks to your practice. Refurbished equipment allows you to lower your overall risk and provides increased financial strength to meet unexpected challenges.

## Gain Peace of Mind

Our experienced project management team is here to help during every step of the process. With our rigorous inspection process and no-risk warranty, you can have peace of mind that you're getting quality, reliable medical equipment.

# WHY ROS?

## Expert Resource

We leverage our 20+ years of experience and share our industry expertise to help you select the best quality equipment for your investment and for your patients.

## Quality Medical Equipment

We have one of the largest selections of pre-owned, refurbished radiation therapy and diagnostic imaging equipment, accessories, and parts all of our ROS-certified machines undergo a rigid inspection and are guaranteed to meet OEM specifications.

## Start-to-Finish Solutions

We offer a full range of services to help you with every step of the process, including: shipment, delivery, installation, training and service.

## Successful Track Record

We have successfully managed and completed over 700 radiation therapy and diagnostic imaging equipment projects around the world.

## Global Presence

We have partnered with more than 500 facilities in over 20 countries and have a global network of best-in-class engineers to inspect, install, test, and service your equipment.

## Dedicated Partner

We will be a true partner throughout the project with a dedicated project management team working with you from start to finish.
