

REFURBISHED RADIATION THERAPY EQUIPMENT SOLUTIONS

Over 50% of all cancer patients can benefit from radiation therapy in the management of their disease, but lack of access still compromises the care of millions of people suffering from cancer. Together, we can change that.

Let us help you find a refurbished linear accelerator or CT simulator that will allow you to provide life-saving cancer treatments to your patients.

Linear Accelerators

A linear accelerator (Linac) is an essential component for any radiation oncology care provider. As one of the world's largest suppliers of pre-owned linear accelerators, we offer a full range of linear accelerator equipment and service solutions.

CT Simulators

A CT simulator is also a vital component in the radiation oncology facility, helping clinicians determine the best treatment plan for their patients. We provide a variety of pre-owned, refurbished CT simulators to meet your requirements.

Radiation Therapy Equipment

We also provide other types of pre-owned radiation therapy equipment, including: HDR/Brachytherapy, Superficial, Cobalt Systems, Intraoperative Radiation Therapy (IORT), and Gamma Systems.

Software and Accessories

We offer a range of new and pre-owned accessories and upgrades for your linear accelerators, to help you extend the life of your equipment and outfit your entire department.

Is Buying Refurbished Medical Equipment Right For You?

Depending on your specific needs and financial constraints, purchasing refurbished or pre-owned medical equipment can provide significant benefits for your facility.

Grow your Practice

Whether you're opening a new center, adding additional equipment, or just want to enhance your clinic's capabilities, buying refurbished medical equipment is a savvy way to grow your practice.

Maintain Strong Backups

Should something happen with one of your existing machines, a refurbished system can serve as a valuable backup to ensure there's no interruption in patient care.

Improve Patient Care

Purchasing a refurbished machine allows you to purchase technology you may not be able to afford otherwise. It also frees up budget dollars that can be used to invest in other areas of your practice, such as new upgrades, a remodel, or hiring more staff, thereby improving your practice and the lives of your patients.

Improve ROI

Payers make no distinction between new and refurbished. So why pay more for the same reimbursement? Additionally, buying "experienced" equipment often means lower annual maintenance/service contract expenses. The bottom line is a better bottom line.

Lower Financial Risk

Uncertainty of patient volume. Future competitive threats. Reimbursement rate changes. There are always risks to your practice. Refurbished equipment allows you to lower your overall risk and provides increased financial strength to meet unexpected challenges.

Gain Peace of Mind

Our experienced project management team is here to help during every step of the process. With our rigorous inspection process and no-risk warranty, you can have peace of mind that you're getting quality, reliable medical equipment.
